

Hospital Emergency Room Dashboard - Key Insights & Report

Overview

Total Patients: 466, Average Wait Time: 35.06, Satisfaction Score: 4.91.

Key Insights

1. Total patients handled: 466.
2. Average wait time is 35.06 minutes.
3. Patient satisfaction is high at 4.91/5.
4. Admission rate: 236 (50.64%). Not admitted: 230 (49.36%).
5. Around 60% cases experienced delay while 40% were on time.
6. Age group 40-49 has the highest visits (65).
7. Age group 70-79 has the lowest visits (45).
8. Most patients had no referral (273).
9. General Practice generated the highest referrals (98).
10. Orthopedics contributed 47 referrals; other departments had comparatively fewer.

Business Recommendations

- Reduce patient delays by optimizing staff scheduling.
- Investigate causes of long wait times during peak hours.
- Strengthen General Practice triage to reduce unnecessary delays.
- Allocate more resources for the 20-49 age group due to higher patient volume.
- Continue monitoring satisfaction while reducing waiting time.

Interview Summary

The dashboard shows balanced admission rates, high patient satisfaction, but 60% delayed cases indicate operational improvement opportunities. Most patients required no referral, while General Practice handled the highest referrals.
